Investment Objective

To seek provide income and, secondarily, to increase the value of your investment over the recommended holding period. The Sub-Fund mainly invests in a broad range of securities from around the world, including emerging markets. This may include equities, government and corporate bonds and money market securities. The Sub-Fund's bond investments may be of any quality (investment grade or below). The Sub-Fund makes use of derivatives to reduce various risks, for efficient portfolio management and as a way to gain exposure (long or short) to various assets, markets or other investment opportunities (including derivatives which focus on credit, equities, interest rates, foreign exchange, and inflation). The Sub-Fund may use derivatives to gain exposure to loans up to a maximum of 20% of its assets. The investment manager uses its own global economic analysis to determine the most attractive asset types and geographical regions, then uses analysis of individual issuers to identify individual securities that offer the best potential gain for the risk involved.

Risk & Reward Profile (SRRI)

Lower risk, potentially lower rewards

Higher risk, potentially higher rewards

The SRRI represents the risk and return profile as presented in the Key Investor Information Document (KIID). The lowest category does not imply that there is no risk. The SRRI is not guaranteed and may change over time.

Additional Risks

- Credit risk: represents the risks associated with an issuer's sudden downgrading of its signature's quality or its default.
- Liquidity risk: in case of low trading volume on financial markets, any buy or sell trade on these markets may lead to important market variations/fluctuations that may impact your portfolio valuation.
- Counterparty risk: represents the risk of default of a market participant to fulfil its contractual obligations vis-à-vis your portfolio.
- Operational risk: this is the risk of default or error within the different service providers involved in managing and valuing your portfolio.
- Currency risk : the Sub-Fund invests in securities that are issued in currencies other than the base currency of the share-class. As a result the share-class is subject to currency risk, which arises from changes in the exchange rates.

The use of complex products such as financial derivative instruments might increase market movements in your portfolio.
