

Amundi receives two Climetrics Fund Awards, recognizing our efforts on environmental ambition, action, and transparency

Amundi Actions USA ISR and Amundi Funds US Pioneer Fund both received a Climetrics Fund Award at the CDP Europe Awards 2021 on 2 March.

The event, organized by the international non-profit organization CDP, gathered the highest-level business and political decision-makers to challenge them on their plans to lead a truly green recovery towards the EU's 2050 climate neutrality goal.

This year, for the first time, Amundi was awarded during the CDP Europe Awards, which recognize the top 20 funds in 4 categories. Amundi Actions USA ISR and Amundi Funds US Pioneer Fund received the Climetrics Awards in the newly created US equities category:

- **Amundi Actions USA ISR** is a US Equity fund that focuses on stocks combining best ESG scores together with solid financial profiles to meet investors' search for responsible alpha generation. The fund has also obtained the French SRI Label.

- **Amundi Funds US Pioneer Fund** is a US Large Cap Equity strategy with a dedicated ESG mandate. The strategy aims to invest in attractively valued, high quality, sustainable businesses that have high or improving ESG ratings, and has invested in this manner for decades.

In addition to these prizes, on our 242 funds rated by Climetrics, **113 funds received the highest score of 5 "leaves"**, and **96 received a score of 4 "leaves"**, which represents 86% of our rated funds. This is a great achievement, knowing that among the 19,000 funds rated in the world, only 6% obtain 5 leaves.

About the Climetrics rating:

High ratings recognize funds that better support the transition to a lower carbon economy. They invest in companies that are better at managing material issues linked to reducing greenhouse gas emissions, protecting freshwater resources, tackling commodity-driven deforestation. The best-rated funds are also managed by asset managers that take public action to integrate climate change into their governance and investment processes.

Each fund is scores across three levels:

- **Portfolio holdings level** - 85% weight - Climetrics scores investee companies for how well they manage material risks related to climate, water security and deforestation. In addition, the scores reflect companies' involvement in providing low-carbon products, and they capture potential stranded asset risk linked to fossil fuel reserves.

- **Asset manager level** - 10% weight - Climetrics scores asset managers on their level of public action on climate change. The score looks at climate disclosure, commitments and participation in global engagement initiatives.

- **Fund investment policy level** - 5% weight - Climetrics rewards funds with an explicit ESG investment strategy and / or ESG label.
