

Pioneer Diversified High Income Fund, Inc.

January 31, 2025

Pioneer Diversified High Income Fund, Inc. is a closed-end fund designed to pursue a high level of current income, with the potential for capital appreciation as a secondary objective. The Fund invests in a unique blend of higher yielding asset classes, including global high yield bonds, leveraged bank loans and event-linked bonds (cat bonds). The market prices of securities may go up or down, sometimes rapidly or unpredictably, due to general market conditions, such as real or perceived adverse economic, political, or regulatory conditions, recessions, inflation, changes in interest or currency rates, lack of liquidity in the bond markets, the spread of infectious illness or other public health issues or adverse investor sentiment. Investments in high-yield or lower rated securities are subject to greater-than-average price volatility, illiquidity and possibility of default. Investing in foreign and/or emerging markets securities involves risks relating to interest rates, currency exchange rates, economic, and political conditions. The market price of securities may fluctuate when interest rates change. When interest rates rise, the prices of fixed income securities in the Fund will generally fall. Conversely, when interest rates fall, the prices of fixed income securities in the Fund will generally rise. Investments in the Fund are subject to possible loss due to the financial failure of issuers of underlying securities and their inability to meet their debt obligations. The Fund may invest a significant amount in illiquid securities, which may be difficult to dispose of at a price reflective of their value. The market price of illiquid securities is generally more volatile than that of more liquid securities. Illiquid securities also are more difficult to value, and may restrict the Fund's ability to take advantage of market opportunities. The Fund is authorized to borrow from banks and issue debt securities, which are forms of leverage. Leverage through borrowings. Leverage creates significant risks, including the risk that the Fund's income or capital appreciation will not be sufficient to cover the cost of leverage, which may adversely affect the return. In order to maintain required asset coverage levels, the Fund may be required to reduce the amount of leverage employed, alter the composition of the Fund's investment portfolio or take other actions at what might be inopportune times in the market. Such actions could reduce the net earnings or returns to shareowners over time, which is likely to result in a decrease in the market value. Certain securities in which the Fund invests, including floating rate loans, once sold, may not settle for an extended period. The Fund will not receive its sale proceeds until that time, which may constrain the Fund's ability to meet its obligations. The Fund may invest in insurance-linked securities. The return of principal and the right to additional payments from investments in insurance-linked securities are contingent on the non-occurrence of a predefined "trigger" event that leads to physical or economic loss, such as a hurricane or an aerospace catastrophe. These risks may increase share price volatility.

Portfolio Characteristics

Weighted Average Life	6.12 Years
Effective Duration	2.29 Years
Current Distribution Rate (on market price)	9.84%

Duration is a measure of the sensitivity of the price (the value of principal) of a fixed income investment to a change in interest rates, expressed as a number of years. Effective Duration (also called option-adjusted duration) is a duration calculation for bonds that have embedded options. Current Distribution Rate is calculated by dividing the last distribution per share (annualized) by market price. It does not reflect return of capital. **The performance data quoted represents past performance, which is no guarantee of future results.**

Pioneer Diversified High Income Fund, Inc. Offers Investors:

- Attractive current income potential through a portfolio of higher yielding securities
- Enhanced diversification** through a unique mix of asset classes with low correlations to each other as well as to most traditional asset classes
- Limited duration (or interest rate) risk through investment in floating rate coupons offered by both bank loans and event-linked bonds, to help reduce overall volatility.

** Diversification does not assure a profit or protect against loss.

Portfolio Management

Day-to-day management of the Fund is managed by portfolio managers Andrew Feltus, Jonathan Sharkey, Larry Zeno and Chin Liu. Mr. Feltus, CFA, Managing Director and Co-Director of High Yield, has more than 20 years' experience in fixed income management, including extensive experience with global high yield securities. Mr. Sharkey, a Senior Vice President, has over 20 years of experience in the bank loan sector. Mr. Liu, a Managing Director and Director of Insurance-Linked Securities and Fixed Income Solutions, has been an investment professional since 2005. Mr. Liu manages event-linked bonds and other insurance-linked securities (ILS) across multiple fixed-income portfolios. Mr. Zeno, a Vice President, has over 20 years' experience in fixed income management.

Call 1-800-225-6292 or visit amundi.com/usinvestors for the most recent month-end performance results. Current performance may be lower or higher than the performance data quoted.

Performance data shown represents past performance. Past performance is no guarantee of future results. Investment return and market price will fluctuate, and your shares may trade below net asset value, due to such factors as interest rate changes, and the perceived credit quality of borrowers.

Total investment return does not reflect broker sales charges or commissions. All performance information is for common shares of the Fund.

The performance information does not reflect the deduction of fees and taxes that a shareowner would pay on Fund distributions or the sale of Fund shares. Had these fees and taxes been reflected, performance would have been lower.

Shares of closed-end funds, unlike open-end funds, are not continuously offered. Once issued, shares of closed-end funds are bought and sold in the open market through a stock exchange and frequently trade at prices lower than their net asset value. Net Asset Value (NAV) is total assets less total liabilities, which includes preferred shares, or borrowings as applicable, divided by the number of common shares outstanding.

When net asset value (NAV) is lower than market price, dividends are assumed to be reinvested at the greater of NAV or 95% of the market price. When NAV is higher, dividends are assumed to be reinvested at prices obtained through open market purchases under the Fund's dividend reinvestment plan.
